

Click Framework v1.0 Cheat Sheet

Page Processing

- *no-args constructor used to create new Page*
- *context, format, headers and path dependencies set*
- `onInit()` – called to complete initialization
- `onSecurityCheck()` – called for security check
- *all the page controls are processed*
- `onGet/Post()` – called for additional processing
- `onRender()` – called for pre-render processing
- *page template and model is rendered*
- `onDestroy()` – called to clean up any resources

Template Model Includes

- *any public Page fields by field name*
- `context` – the servlet context path
- `format` – the Format object
- `imports` – the PageImports object
- `messages` – the MessagesMap object
- `path` – the path of the Page template
- `request` – the HttpServletRequest object
- `response` – the HttpServletResponse object
- `session` – the SessionMap object

Velocity Directives

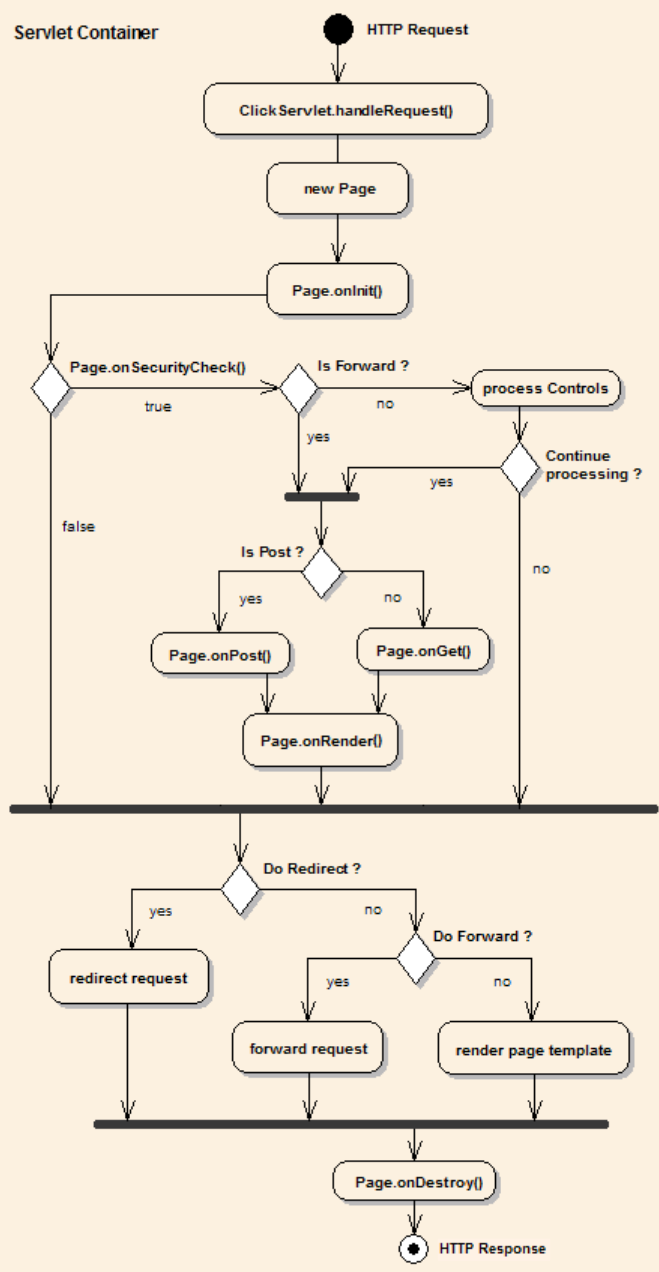

- `#if #elseif #else #end` – conditional statement
- `#foreach` – list iterator
- `#macro` – defines Velocity macro
- `#set` – variable declaration
- `#include` – include file directly without parsing
- `#parse` – parse and render the specified template
- `#stop` – stops the execution of template

Core Controls

- ActionButton
- ActionLink
- Button
- Checkbox
- Column
- FieldSet
- Form
- HiddenField
- ImageSubmit
- Label
- Option
- OptionGroup
- PageLink
- Panel
- PasswordField
- Radio
- RadioGroup
- Reset
- Select
- Submit
- Table
- TextArea
- TextField

Extras Controls

- CayenneForm
- CheckList
- ColorPicker
- CreditCardField
- DateField
- DoubleField
- EmailField
- FieldColumn
- FormTable
- IntegerField
- LinkDecorator
- ListPanel
- LongField
- Menu
- NumberField
- PageSubmit
- PropertySelect
- QuerySelect
- RegexField
- TabbedCayenneForm
- TabbedForm
- TabbedPanel
- TelephoneField

click.xml File

```
<?xml version="1.0" encoding="UTF-8"?>
<click-app charset="UTF-8" locale="de">

  <pages package="com.mycorp.page"
    automapping="true"/>

  <headers>
    <header name="Pragma" value="no-cache"/>
  </headers>

  <mode value="debug"/>

</click-app>
```

Click App Modes

- `trace` – trace logging
- `debug` – debug logging
- `development` – info logging (default)
- `profile` – caching, info logging
- `production` – caching, warn logging
